

Hanzo

Helping enterprises manage, address, and reduce legal risk wherever work gets done.

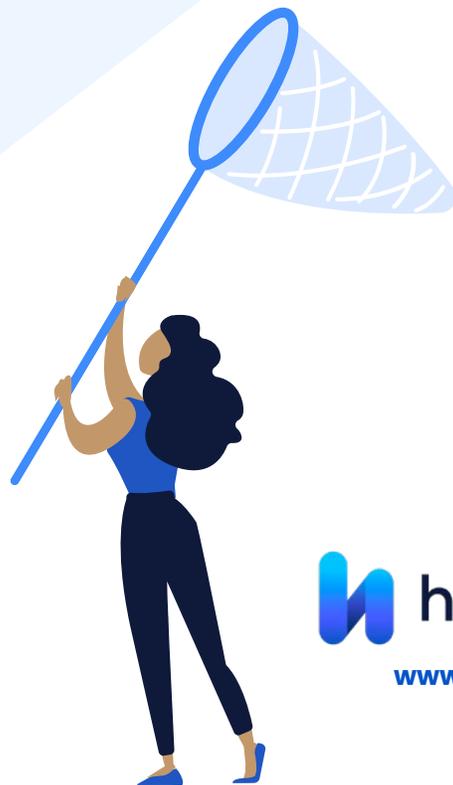

Enterprise risk is shifting

In the not too-distant-past, email and Office apps made up the bulk of corporate communication. Today, organizations use Slack, social media, Jira, Confluence and dozens of other cloud-based applications to communicate, collaborate and get work done. This proliferation of data has made legal and compliance exponentially more complicated and created new forms of risk.

Legacy collection and archiving tools don't effectively address these new forms of risk.

Collaborative apps are the hub of your company's communication, which means they're also a core for potential litigation, investigations, privacy issues and IP disputes. You can't control everything that happens on these apps, but you can control how you manage the risk.

Hanzo can capture, preserve and archive data sources that other tools can't.

Manage, address and reduce legal risk wherever work gets done.

Use Hanzo's leading solutions [Hanzo Hold](#) and [Hanzo Dynamic Capture](#) to collect essential data for investigations, litigation, and digital archiving compliance wherever employees communicate and collaborate. Hanzo is helping Fortune 500 companies manage their risk in these areas.

Litigation

- Spend less time collecting data and less money on external review with highly targeted data collection
- Quickly and easily collect data from Google, Slack and cloud-based apps in-house, reducing the amount of data you need to send out for external review.
- Orchestrate legal holds across Google and Slack in just a few clicks.
- Collect digital communications from custodians wherever work gets done in your company — Slack, Google, Jira, cloud-based apps and internal systems.

Enterprise information archiving compliance

- Ensure defensible data preservation, archiving and auditing in compliance with SEC, FINRA, and FDA regulations.
- In the event of an audit, quickly find the information you need to demonstrate compliance and a defensible process.
- Capture, preserve and archive data sources that legacy tools can't — dynamic and interactive content, social media (LinkedIn and Twitter), collaborative apps, and internal SaaS systems.
- Securely archive data from internal SaaS systems to comply with internal auditing requirements and regulations.

HR investigations

- Spend less time collecting and sorting through employee communications.
- Quickly identify relevant conversations and produce defensible proof they occurred.
- Collect and analyze digital communications wherever work gets done in your A—Slack, Google, Jira, cloud-based apps and internal systems.
- Find the "needle in the haystack" communications needed to form an accurate opinion about the cause of investigation.

IP protection

- Defensibly demonstrate when and where IP was created, wherever it was created.
- Capture data wherever employees communicate and collaborate — Google, Slack, Jira, Confluence, as well as cloud-based project management, diagramming and collaboration tools.
- Find the "needle in the haystack" data needed to prove defensibility with automated crawling and keyword monitoring.
- Create a central repository of critical employee communications and data sources to protect and defend your company's IP.

Learn More

Hanzo provides the best Ediscovery solution for collaboration applications like Slack and we provide best-in-class web archiving for enterprises to capture dynamic websites and other SaaS content.
