

# Creating Order from Chaos – Close the Case Faster with SYSTRAN eDiscovery

Create streamlined intelligence from data chaos while scaling your eDiscovery workflow across language barriers. Securely translate and sort through thousands of documents at light speed with SYSTRAN's leading edge neural machine translation software. SYSTRAN integrates with the best digital forensics and legal compliance platforms, making your eDiscovery process a breeze, finding the seemingly untraceable evidence you need to secure the right verdict.

## SYSTRAN Takes the Case: Automate Fact Finding and Expose Critical Data Immediately

### Translate Thousands of Words in One Click

From patent documents to legal briefs, emails to chat transcripts, business contracts to deposition transcripts—translate any text in more than 55 languages within your digital forensics review platform. Keep protected information secure on owned-by-you servers while supercharging your eDiscovery time frame. Save thousands of hours and focus on what you do best: crafting your argument, not sifting through digital documents.

- Fully compliant translation software for legal documents
- Works with PDF, .DOCX, .PPTX, and many more file formats
- Amazing results out of the box, plus AI that improves output over time
- Industry-specific translation models ideal for in-house legal teams

# Why NMT For Legal Translations?

Language translation services are expensive and run at a snail's pace - only machine translation solutions can scale at the volume and speed required by global law firms and in-house legal teams. Plus, AI-powered translation servers continuously learn with use, building vocabulary sets for even the most technical industries. Only SYSTRAN has spent more than 50 years developing industry leading NMT, and leading law firms have already begun to unleash its power in their favor.

- **Speed:** translate 100s of pages in seconds, not days and find key pieces of evidence in record time
- **Security:** avoid illegal and contract-breaching data misuse — or identify it and stop it in its tracks Customization:
- **Customization:** purpose-built features for your entire organization's translation needs, legal and beyond
- **Compliance:** ensure your team works only in approved programs and stays within the legal limits
- **Accuracy:** trust every translation output to back up your arguments
- **Affordability:** reduce and consolidate your annual translation costs while minimizing evidence review hours to keep your team lean and mean.

**“The biggest return on investment comes from the cost savings for clients by being able to translate documents as the case goes and evolves — it means they don't have to have a ready-made pool of people that have familiarity with a language that they can call on immediately. It means the group of people that need to review a case is much smaller. So, less reviewer hours makes for a lower cost case which makes for happy clients.”**

## About SYSTRAN

Since 1968, SYSTRAN has been an industry leader in machine translation solutions. We leverage AI and deep learning to help streamline and automate translation. **We're committed to providing the best translation solutions and full data privacy paired with responsible technology.**
