RWS
Language Weaver

Illuminating

Shedding a light on why you should integrate
Language Weaver into your legal practice.

Language Weaver combines proven linguistic AI expertise with state-of-the-art technologies to provide global organizations with fully scalable, infinitely adaptive, and secure-by-design machine translation.

Built for the enterprise and infused with a security-first approach, Language Weaver is offered in multiple deployment options, giving ultimate control over translations—no matter your specific legal requirements.

For **legal** teams

- Secure translations seamlessly integrated into existing workflows and processes.

- Complete confidence in confidential client data security.

- Speedy outcomes through superior document handling and processing.

- Improved collaboration between international teams working on multilingual data.

- Continuously learning AI technology enhances performance and efficiency over time.

For **IT** teams

- Tight security controls over confidential data mitigates business risk.

- Simple integration means no complicated, error-prone overhaul of systems.

- Intuitive use increases Language Weaver adoption across the organization.

- Clear reporting and labelling mean no onerous management requirements.

Language Weaver
key features

See why Language Weaver is the proven secure machine translation solution that protects your organization at every step, while delivering significant business value.

1

Robust user access and security

Built for the modern enterprise, Language Weaver provides seamless user access and experience controlled by strict role-based permissions across all deployment models.
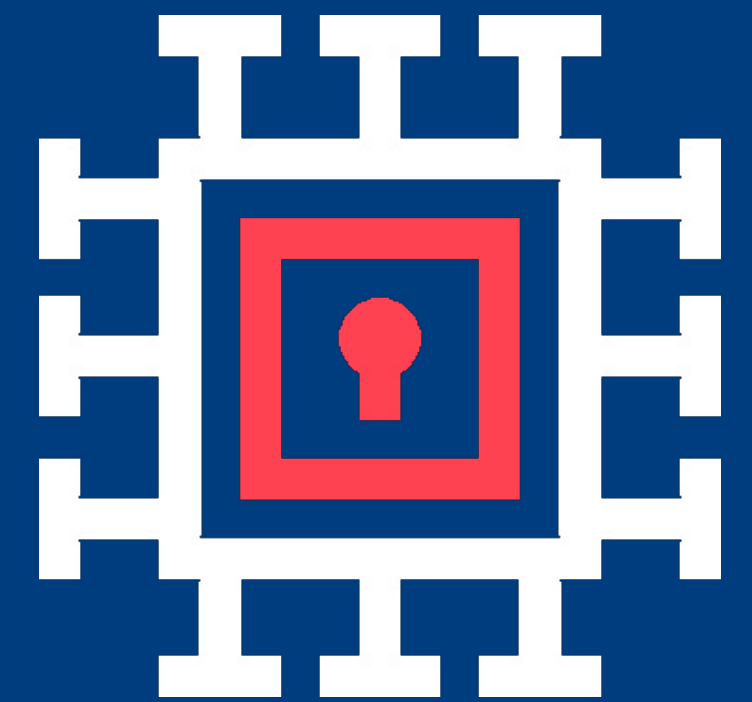

Single sign-on (SSO)

For seamless, streamlined, straightforward user access to all system UIs and functionality.

Branded translation portal

Translation portal with client branding to deliver a simple, intuitive, and consistent UX.

User roles and permissions

Role-based access management provides central control of user permissions to secure sensitive data.

2

Superior document handling

The volume and variety of documents across the legal landscape continue to increase at a rapid pace. For effective legal operations, this calls for machine translation solutions that have proven, best-in-class document-handling capabilities.

Feature-rich functionality

Designed to handle any translation request, Language Weaver provides rich, comprehensive document-handling capabilities—regardless of source language, file type, or format.

Upload, translate, and download documents in simple, intuitive steps. Translated documents preserve original format and layout for optimal ease and convenience.

ABBYY OCR

Built-in integration with ABBYY OCR allows users to translate all data quickly—regardless of complexity or formatting. ABBYY's advanced algorithms convert non-editable documents into digital text while preserving formatting to drive user adoption.

No data ever travels to third-party systems for processing, guaranteeing secure, compliant translation of sensitive or confidential information.

Document-level feedback editor

Direct user feedback mechanisms let users suggest better translation options to optimize performance over time, with users benefiting immediately.

You can collect feedback at scale, adapt AI models, and tailor outputs to your specific requirements, all within a secure environment.

Document content insights

Multilingual content insights provide a dynamic, automatic summary of any document or a set of documents in any language.

Whether you need to translate two pages or 200, you can extract and distil insights instantly for faster and better decision-making.

3 Clear oversight

Developed with reporting functionality built-in, Language Weaver provides all the necessary capabilities to track granular-level real-time project progress—and then assign specific labels for simplified reporting.

In-depth reporting

Detailed and flexible reporting capability provides robust and tight oversight of your projects.

Assign, monitor, and track every translation to a specific project—including usage and volume—by user, group, matter number, or docket number.

Labels management

Our labels management function gives you granular visibility for client-defined attributes.

Labels can be any meaningful identifier for your business needs, and, once assigned, they allow usage tracking based on personalized, pre-defined categories and offer an enhanced possibility to customize throughput consumption statistics.

4 Customizable dictionaries

The legal sector relies on specialist, industry-specific terminology—with clients having their own preferred terms too.

Language Weaver's customizable dictionary allows your organization and teams to standardize or enforce key terminology in their translation outputs so they always include your desired industry - and domain-specific terms.

Seamless integration

5

Language Weaver provides a secure and user-friendly translation web portal. But with seamless integration, it turns into a feature button within your existing system that puts secure, instant translation at the fingertips of legal teams.

Native integrations

Through an API, Language Weaver easily integrates with your existing systems and workflows.

Effortless interoperability includes out-of-the-box connectors for popular applications like Microsoft Office, Chrome, Edge, Firefox, and many more industry standard tools —making real-time translation more seamless than ever.

Relativity eDiscovery integration

Language Weaver has built-in integration with Relativity—the market-leading eDiscovery solution provider—to facilitate instant and seamless translation of multilingual data in eDiscovery workflows.

'Language Weaver Translation app for Relativity' allows individual and batch document translations. And, to aid flexibility, translation can be carried out directly on the native file in Relativity or on the extracted text.

Native integrations

Language Weaver partners with Betty Blocks—a low-code platform for rapidly building customer-facing and internal applications—to enable staff with little coding or translation knowledge build multilingual applications and assemble flexible translation solutions to meet their needs.

As a result, your IT/development teams can integrate requisite workflows into new or existing systems without extensive resource burden or security risks.

Deploying Language Weaver

Language Weaver is built to be a light IT lift for installation and deployment while delivering a feature-rich experience and unmatched security. Three deployment options are available, and our Business Consulting Team will work strategically with you to determine which is most appropriate for your needs.

Cloud

Embrace the infinite flexibility of cloud.

Integrated directly to your environment via a Language Weaver API, Cloud Portal, or Connector Hub, Cloud deployment provides ultimate flexibility to suit your needs.

Key features

- **Tap into the broadest language coverage.**
  Access a huge range of languages across 3,000+ language pair combinations.

- **Comply with regional data protection laws.**
  Hosted separately in the US and EU, attuned to regional data protection laws.

- **Meet certification requirements.**
  Language Weaver is ISO 27001:2013 certified for Information Security Management Systems. Enjoy robust security measures to protect sensitive information, address security risks and implement rigorous incident response, as well as business continuity planning.

Edge

Your security, your way.

Deployed on-premises or in your private cloud, Edge deployment keeps your content secure by ensuring all translation processing stays within your environment.

Key features

- **Deploy privately in your own environment.**
  Your content, your AI, your firewalls.

- **Scale exactly as you need to.**
  From a single language pair and 2,000 words per minute (WPM) through to 150+ direct language pairs with 500,000+ WPM, we guarantee throughput and optimized performance with automatic scaling capabilities – from a single device all the way up to a server farm.

- **Enjoy versatility in deployment.**
  High-level flexibility to suit your organizational constraints—choose to install on physical hardware, run on virtual machines, or deploy within containers.

- **Experience isolated functionality.**
  Language Weaver can function in a completely isolated environment if necessary. Add an extra dimension to your security by disconnecting from the external world.

Hybrid

Enjoy the best of both.

Combining the capabilities of Cloud and Edge, the Hybrid model delivers a fully customizable deployment that delivers optimal flexibility without compromising on-premises security and privacy.

- **Adopt the flexibility of Cloud at the Edge.** Deploy your Edge application on-premises, while securely connecting to Language Weaver in the cloud to access additional capabilities.

- **Choose the language pairs you need, when you need them.** Access additional languages from outside the defined set and apply them to your Hybrid solution as and when they're needed.

- **Rest easy with encryption at exchange.** Data exchange is via an encrypted link, but original source content and documents never leave the secure IT infrastructure provided by Edge.

- **Strengthen your translation security.** Combine the advanced translation capabilities of Language Weaver with the heightened security and control offered by Language Weaver Edge.

End-to-end support

When you engage Language Weaver, you enjoy all the benefits of a full end-to-end relationship—from initial consultation, through implementation and success management, all the way to ongoing optimization and support.

Business consulting team

Guidance and partnership throughout scoping, deployment, and installation decision-making processes.

Dedicated customer success manager

Deployment support and follows-up with ongoing and regular checkpoints to ensure your needs are always met.

Professional services options

Including custom landing page, custom reporting, integrations into existing platforms, and training data creation for adaptation.

Ongoing customer support

Expert customer support for all operational and technical questions, delivered through a portal working in tandem with your Customer Success Manager.
