

# Confidence and Clarity for eDiscovery

High-stakes matters demand more than a service provider. They require a partner who understands litigation risk, navigates evidence with precision, and communicates with the judgment of someone who has been in the chair. Our digital forensics, eDiscovery, and managed review teams bring an evidence-first approach to every engagement.

## Who We Are

Level Legal is built by and designed for litigators. We approach eDiscovery as part of the advocacy story, not a technical workflow to be offloaded. Our focus is on judgment, defensibility, and clarity so you can move quickly without compromising credibility.

With decades of experience handling eDiscovery-intensive disputes, internal investigations, and multi-party litigation, we know what AmLaw teams and Fortune 100 clients expect: A partner who is steady, accountable, and aligned with your high expectations.

“ They are dependable, they are reliable, and their work is excellent. They feel like family and friends. ... It doesn't feel transactional.”

– Diana Feinstein, Partner, Gibson Dunn

## What We Deliver

### Defensible-by-Design Workflows

We build workflows that are documented, explainable, and ready for challenge—from preservation through production. We use AI when it helps, and avoid it when it doesn't.

### Matter-Specific Strategy

We meet each case where it is. No platform bias. No one-size-fits-all templates. Just sound judgment grounded in litigation realities.

### Operational Clarity

We eliminate ambiguity. You know what is happening, why it is happening, and how it supports the record you must defend.

### Human Accountability

Experts, not algorithms, own decisions that touch the record, privilege, and the story you need to tell.

## What We Do

### Digital Forensics

- Secure, defensible collections
- Forensic analysis tied to fact development
- Expert declarations and testimony

### eDiscovery

- Matter-specific workflow design
- Managed services with high-touch oversight
- Training and enablement for legal teams
- Processing, analytics, reporting, and hosting
- Productions engineered for loadability and clarity

### Managed Review

- Precise scoping and issue mapping
- Production and privilege readiness
- Custom review workflows
- Privilege analysis and defensible logs
- Accelerated fact development
- Deposition and trial preparation
- Multilingual review

### Additional Support

- Internal investigations
- Data Subject Access Requests
- M&A and regulatory diligence
- Departed employee analysis
- Subpoena and third-party responses
- Contract review
