

AI Transcription & Translation

Save time, improve report accuracy, and approach investigations more comprehensively with highly-accurate AI transcription and translation.

Automate transcription of content

Leverage over 130 transcription cognitive engines with proprietary machine learning technology to capture interviews, depositions, calls, and statements.

Reduce manual review time and prioritize high-value activities

Support chain of custody requirements with automated, immediate, and accurate transcript composition.

Access and search against all content

Search documents, audio, and video content by keywords, phrases, proper nouns or acronyms to quickly find critical information.

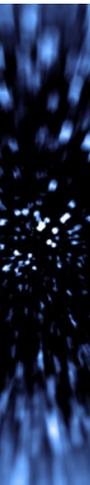

Transcribe in multiple languages and dialects

Transcribe in 65 native languages and in multilingual scenarios (i.e. combination of Spanish and English) with the ability to then translate to English.

Broaden visibility of all cases

Correlate transcribed content with other offices and regions to find common trends, suspects, and behaviors.

Veritone supports transcription in multiple languages including:
